ASSIGNMENT 1 – AVNI SHARMA (MODULE 2)

No.	Problem (click to open)	Platform	Difficulty
1	Conditional Statements in C	HackerRank	Very Easy
2	2413 — Smallest Even Multiple	LeetCode	Very Easy
3	Grading Students	HackerRank	Easy
4	Roy and Profile Picture	HackerEarth	Easy
5	FizzBuzz	HackerRank	Easy

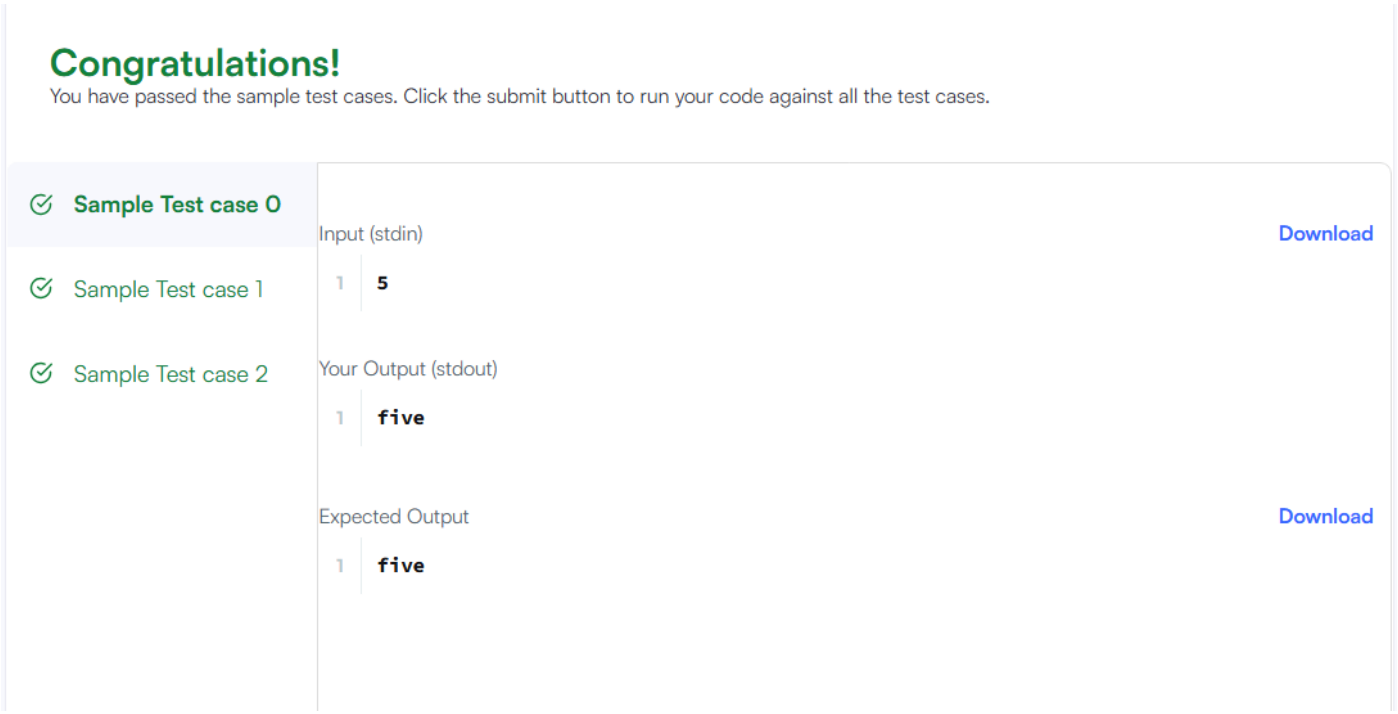

1. Conditional Statements in C | HackerRank

```c
#include <stdio.h>

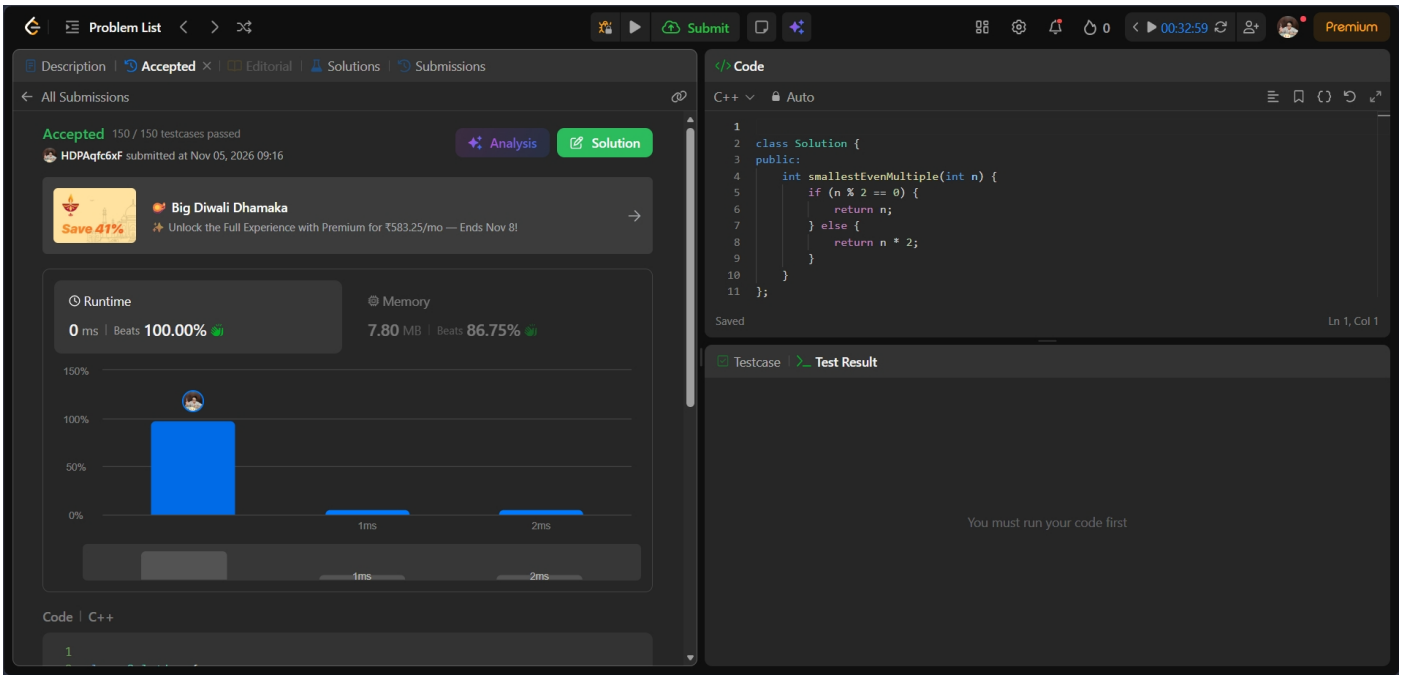

int main()
{
    int n;
    scanf("%d", &n);

    if (n == 1)
        printf("one");
    else if (n == 2)
        printf("two");
    else if (n == 3)
        printf("three");
    else if (n == 4)
        printf("four");
    else if (n == 5)
        printf("five");
    else if (n == 6)
        printf("six");
    else if (n == 7)
        printf("seven");
    else if (n == 8)
        printf("eight");
    else if (n == 9)
        printf("nine");
    else
        printf("Greater than 9");

    return 0;
}
```

2. [Smallest Even Multiple - LeetCode]

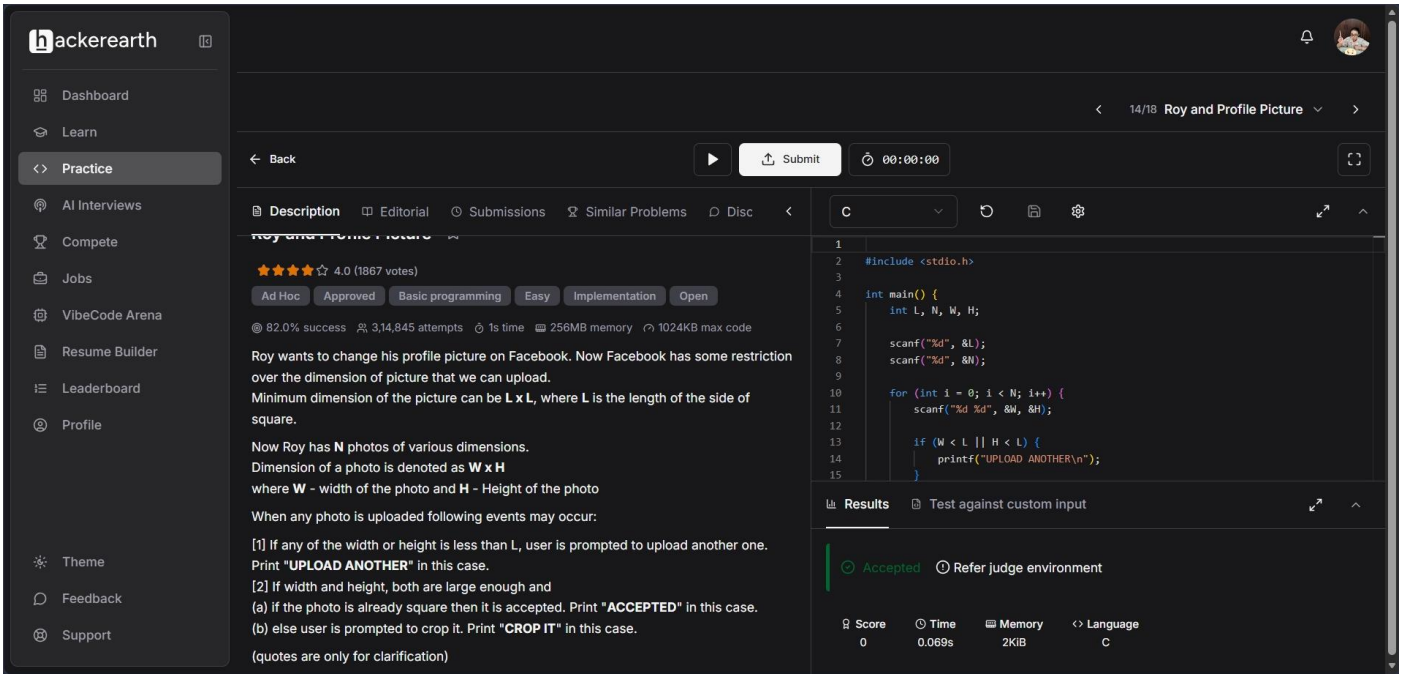

3. [Grading Students | HackerRank]

```
Int*gradingStudents(int grades_count, int*grades, int*result_count){
    *result_count = grades_count;
    Int result = malloc(grades_count*sizeof(int));
    for (int I = 0; i<grades_count; i++){
        int grade = grades[i]
        if(grade>=38){
            int remainder = grade % 5;
```

```
                if (remainder>=3{
                        grade +=(5-remainder);
                }
            }
        result[I] = grade;
}
return result;
}
```

4. [Roy and Profile Picture | Basics of Input/Output & Basic Programming Practice Problems]

5. [FizzBuzz | HackerRank]

```
#include<stdio.h>
int main(){
for(int i=1;i<=100;i++)
printf(i%15==0?"FizzBuzz\n":i%3==0?"Fizz\n":i%5==0?"Buzz\n":"%d\n",i);
}
```
